Soft Skills

- Communicative Ability
- Technology Passion
- Great Analytical
- Management
- Self - Taught
- Team Work
- Attitude

Summary

Hi my name is Carlos. Nice to meet you! I'm a passionate Software Developer and enthusiast of new technologies, programming and innovation. Along with my years of experience working with multiple programming languages/technologies I currently work as a Full Stack which I enjoy as it allows me to work on applications from end-to-end. I find your company fascinating, I admire company's prestige, employees recommendations, technologies and the work the company does. I'll love to share and increase my knowledge and bring my abilities to this position.

Education

2015 - 2019 **Systems Engineering Diploma Degree** National University of Costa Rica

2015 - 2020 **Systems Engineering Bachelor Degree** National University of Costa Rica

Experience

01/26 - 10/26 **Full Stack Developer (.NET/Angular)** Gorilla Logic

- Worked as a Full-Stack Developer on a multi-tenant application built with Angular and .NET Core, contributing to multiple projects. Implemented frontend features using Angular Material, TypeScript, SCSS, RxJS, HTTP services, feature-based modules, and sensitive data handling. Developed backend functionality using custom middleware, CQRS, MediatR, background processing, Minimal APIs, standardized service responses, and the Named Factory pattern.

  Achievements
  - Implemented Hangfire background jobs with queue-based processing to execute on-demand tasks and asynchronous workflows. Used structured JSON configurations to define workflow steps, triggers, and data schemas supporting dynamic user interactions.
  - Leveraged Cursor IDE and AI-assisted development to accelerate implementation, improve code comprehension, troubleshoot issues, and plan new features. Defined reusable rules and skills to standardize development tasks and improve workflow consistency.
  - Integrated Dropbox APIs through REST endpoints and authentication flows, enabling third-party sign-in, file uploads, document editing, and automated field population using client information.
  - Used RxJS with Angular to manage asynchronous data flows, API requests, and component state through Observables and reactive programming patterns. Integrated Angular Material components and Angular @Input()/@Output bindings to support data-driven UI interactions.
  - Developed, optimized, and debugged SQL Server scripts for data seeding, updates, queries, migrations, and database views. Integrated database operations with .NET and AutoMapper to support

06/22 - 12/26 **Full Stack Developer (.NET, Angular/Blazor)** Gorilla Logic

- Worked as Full Stack Developer for a Blazor application, defining an architecture based on multiple tenants. Performed a Developer lead role, by taking decisions on solutions approach, peer reviews execution and participating on architectural decisions.
- Worked as Backend Developer, on .NET Core/VBA solutions for a Windows Service, applying Design Principles, configuring Database communication/modeling, creating Unit and Integration Tests in order to define a looped timed Producer-Consumer queue application.
- Worked as Angular Frontend Developer for a SaaS application, on Components definition with style customization, API consumption, routes definition, identifying and fixing bugs, improving User Experience by performing smoking tests.

  Achievements
  - Configured Multi-language support through the usage of Resource files and localization service.
  - Created Blazor Components and customized those by using Telerik Controllers according to UI designs.
  - Developed an interactive drag & drop system using Konva JS library in order to provide client's customization of their own offices for space reservation purposes.
  - Performed migrations from Angular Material to Tailwind library.
  - Performed migrations from .NET 3.5 to .NET 8.0.

04/21 - 06/22 **Full Stack Developer (.NET Core & VueJS)** Growth Acceleration Partners

- Worked as a Full Stack Developer using SCRUM methodology with an international team on multiple .NET/Core projects, creating new functionality for Front End and Back End, researching discovery tickets, been part of architectural decisions, identifying/fixing improvement or bugs in the process.
  Achievements
  - Stored Procedures creation in order to reduce several SQL queries and complicated Back End logic.
  - Designed endpoints logic from API routes definition, Authorization, Dependency Injection to SQL queries execution using Dapper.
  - Definition of Components from defining HTML structure and styling, improving UI designs, developing logic to testing for different scenarios.
  - Developed batch files for common Tasks like DataBase, Tables and Stored Procedures creation, Building Solution and Unit Tests execution.
  - Implemented SignalR library in order to trigger and broadcast real-time content (notifications) through connected users.
  - Implemented SonarQube platform with help of Jenkins jobs as a CI tool that will help on code analysis, code enhancements in a safer and cleaner way.
  - BackEnd Unit Tests definition using NUnit with help of Mock Data and Dependency Injection.
  - Vue-Router configuration, routes definition in relation with components, using Axios in order to request sequential data using async functions.

Further Training

Frontend: .NET Core/ASP, Blazor, HTML, CSS, Bootstrap, Blazor, TS, Node, Vue, Angular, SignalR, jQuery, AJAX, Tailwind, Material Angular.

Backend: C++, Python, C#, .NET, VBA, Bash.

Data & ORM: SQL Server, MySQL, PostgreSQL, MongoDB, FireBase, LINQ, Entity Framework, REGEX, Dapper.

DevOps & Automation: Azure DevOps, Docker, Docker Compose, Jenkins, Bash.

Cloud & Infrastructure: Firebase, Azure (VM, Functions, BLOB Storage).

Collaboration Tools: Git, Github, TFS, VS Live-Share, JIRA, Figma, Postman.

AI Tools: Cursor, ChatGPT, Github Copilot, Cursor Rules/Skills.

Testing: NUnit, JEST, Mock, SonarQube.

Certifications

2024	**ASP .NET Core Razor Pages The Complete Guide (.NET 6)**	Udemy
2024	**C# Intermediate: Classes, Interfaces and OOP**	Udemy
2024	**C# Advanced Topics: Prepare for Technical Interviews**	Udemy
2025	**Complete Cursor AI: Vibe Code a Full-Stack Next.js 15 App**	Udemy
2025	**NodeJS - The Complete Guide (MVC, REST APIs, GraphQL, Deno)**	Udemy
2025	**Learn and Understand NodeJS (V8, Express, MERN/PERN & more)**	Udemy
